Cross Reference Table Delmonte/Vanhoudt & Saunders		572-582

FOREWORD

In 1967, Mr A. Delmonte wrote in the foreword to his book *The Silver Benelux* that since the end of the 15th century, silver was available in larger quantities primarily thanks to discoveries in the Americas. This led to the production of heavier silver coins all over the world. His book and the overview of the heavy silver coins of the Benelux was intended to support the knowledge of the collectors.

The book *The Silver Coinage of the Low Countries* covers the period from the 16th century until the end of the Franch period and describes all the types related to the Low Countries.

More than 300 years of silver coinage delivers a precious, artistic and attractive historical document to everyone's eye. Especially for local history, these silver coins can represent a story of wars, international contacts and exceptional economic prosperity as well as hard times.

This book is designed for collectors and dealers. It gives an overview of all types of silver coins that have been produced in the Low Countries and the Overseas territories over the period from about 1500 until 1815. The demarcation of the scope and the material has led to the title *The Silver Coinage of the Low Countries*. The borders of countries and regions have undergone major changes during this period, as a result of which the inclusion or exclusion of certain coins has sometimes been arbitrary. The Low Countries refer to the historical areas that were under the influence of the local rulers mainly on the current territory of the Benelux (Belgium, The Netherlands and Luxembourg) and some in the northern part of France. On the other hand, the Overseas territories are also included to complete the overview.

The most important information is given for each type of coin or silver strike: the province or issuing authority, denomination, mint, a picture or line drawing of the coin, a brief description of the obverse and the reverse design, the complete legends of the coin pictured, dates known, rarity, and price estimates. Collecting the images of some prestigious coins and of the beautiful but extremely rare off-metal strikes in silver was quite a challenge on its own.

This publication is the final result of common efforts between John Saunders and myself. Thanks to numismatist and private collector J. Saunders, it was possible to make a thorough study of this silver coinage and to obtain most of the pictures. Mr Saunders is the driving force and provider of additional information for the collectors such as rarity and a collector's value. The values are 2026 data, priced in euros and can change quickly as the collection market develops.

And of course, many words of thanks and appreciation go out to all collectors, professional numismatists, coin dealers and institutions that have contributed to the creation of this book. Deserve a special mention: several national coin collections and musea: The National Numismatic Collection (NNC), Amsterdam (Mr Beliën, Mr Damsma); KBR, Brussels (Mr Vaneerdewegh); BnF, Paris; Teylers Museum (Mr Pensdonk); many coin dealers and collectors: Jean Elsen NV, Brussels (Mr Elsen); Schulman BV, Amsterdam (Mr Absil); Künker GmbH, Osnabrück (Mr Künker); L. Schulman BV, Harderwijk (Mr & Mrs Schulman); Mr J. Vermeulen; Mr J. Lingen; Mr E. Philippeau; Mr L. Engen; Mr W. van den Nieuwenhof; Mr P. Peeters and all the others.

My greatest appreciation goes to Mr J. Moens for his efforts to make this splendid layout and his advices and to Miss K. Louchart for the photographing of the coins and the administrative work.

And finally, I have no words to thank my co-writer John Saunders for his knowledge, his documentation, his collection and his commitment. All this was feeding the content of this book and even more our friendship.

Thank you all for your help.

Hugo VANHOUDT

Coins minted by provisional Holland Mint in Amsterdam

Note In 1672, when the Republic of the Seven United Provinces was confronted with an invasion by enemy troops from various sides, the Mint of Dordrecht was forced to withdraw northwards to Amsterdam. During its operation between 9 November 1672 and 7 November 1673, two types of coins were struck: the golden ducat and the silver rider or ducaton. The number of ducatons struck was extremely high, resulting in plenty of die and legend varieties. These coins were often poorly struck. When the Mint had returned to Dordrecht some commemorative specimen were made. The classification by type follows Dr H.J. VAN DER WIEL in "De Muntslag te Amsterdam (1672-'73)", *Jaarboek voor Munt- en Penningkunde* 75 (1988), p. 40-58.

3097 | Ducaton or silver ryder, local, imitative coinage issues

Note This is an imitative coinage modeled after the silver ducaton struck for the province of Holland. Based on stylistic elements, Maurits Schulman surmised in the article *Merkwaardige Munten* (1921) that the piece was struck in the former colony of the Netherlands, in the archipelago of Indonesia. William Barrett continues with his work *Brunei and Nusantara – History in Coinage* (1988), suggesting an attribution of the pieces to Bandjermasin, based on extensive research done on imitative coinage of Dutch doits, as many details of this double ducaton resemble those of the doits.

Obv. Armored knight on horse r. above crowned arms, with a legend that approaches the original, even the mint sign of Dordrecht (the shield at the end of the legend).
Rev. Two lions holding crowned Generality shield; **1776** in cartouche; the original CONCORDIA RES PARVÆ CRESCUNT legend is impossible to discern.
